The main herd was dispersed through Exeter Livestock Centre on Friday 26th July.

The Gatton Herd was established as a Friesian Herd in the 1950s, the emphasis has always been on a simple system with maximum milk from home grown forage. For the past 50 years the cows have been grazed on a strict paddock system with fresh grass twice daily, for at least 200 days per year. The herd has been easy fed in the winter in a long manger, using maize and grass silage, supplemented by 2 kg of home grown cereals and purchased rape meal, with cake in the parlour. A small amount of maize silage is buffer fed in the grazing season. The present figures, based on milk sold per cow, are 8,100 litres per cow, with 4,700 litres coming from forage, giving a margin over purchased feed of £2,012 per cow. The breeding policy, over many years, has been to equalise the cows by judicious use of the right bulls in terms of udders, legs and feet, butterfat and protein. Cows not bred to Holstein Friesian are inseminated with an easy calving Simmental or Belgian Blue bull. Sexed Holstein Friesian semen has been used on the heifers for many years, with an Aberdeen Angus bull as a sweeper.

The decision has now been made to disperse the Dairy herd and retire from Dairy farming.

The herd is Cubicle Housed and milked twice daily through the Herringbone Parlour.

NMR Herd Average

The herd is NMR recorded and the following creditable average has been achieved:

8182kgs

4.30%BF

3.23%P

cc176

Herd Health

The herd is vaccinated against BVD and Leptospirosis and is Johnes Monitored, all cows have tested negative regularly.

The herd is in a **4 Year TB testing parish** and the last annual test was on 07.01.2019. Selective dry cow therapy is used including Ubro Red, Ceparlock, Orbeseal and Ceparvin.
